Introduced by representatives Tom Stevens (D-Hilton Head), Michael McCaffrey (D-Thomaston) and Sean Thomases (D-West Monroe), House Bill 265, would require that all data handled by an organization that is subject to the federal Health Insurance Portability and Accountability Act be treated as a controlled substance. That would be an illegal breach of HIPAA and a violation of the federal Privacy Act, so the bill stipulates that if an employee of an organization handling a patient's medical information was to use an application to share information with an affiliated doctor or employer, the organization would be subject to a \$1,000 fine and the employee would face criminal penalties. "The technical aspects of the bill are fairly straightforward and don't really come with a lot of hidden traps," said McCaffrey, the bill's prime sponsor. "It's an issue that the public, legislators and the courts have been debating for a while now, and it's not been going anywhere. It's just a matter of what the legislature can do to control access to this data, and how far that should go." The bill is being widely seen as the direct response to the business practices of websites such as Facebook, which allows its users to share
